

HARVEST IS NEAR...

Are you ready?

The insects are!!

Be prepared this year with **Protect-It®** as part of your insect management program.

By now you will have thoroughly cleaned your empty grain bins and treated them with Protect-It®. As the time to fill your bins approaches, it's important to remember that treating your grain as you auger it into your bin is an important part of infestation prevention.

For maximum efficiency therefore, Protect-It® should be applied to grain as you store it.

Apply Protect-It® while auguring grain into treated storage bin. Remember that it is necessary to adjust application rates depending on the type of grain or seed and the insect species normally encountered in the grain. Standard rates are shown in the adjacent table (for grains not mentioned, contact Hedley Technologies).

Rate of Protect-It®
Per metric ton (g/tonne)

Grain	Rusty Grain Beetle	Other Insects
Wheat	100	300
Barley	150	350
Oats	150	350
Rye	150	350
Peas	300	300
Corn	400	1000
Soybeans	Surface Treatment	Surface Treatment
Feed Grains	Use relevant rates	Use relevant rates

**STORED GRAIN INSECTICIDE
& EMPTY BIN TREATMENT**
